Notes to publisher

10.2.9 Security - Package
Submissions

The binary and all of its Portable Executable (PE) files has been signed with a certificate that has been observed being abused to sign malicious content or must be digitally signed with a code sign certificate that chains up to a certificate issued by a Certificate Authority (CA) that is part of the [Microsoft Trusted Root Program](#). To code sign your app, you can use Trusted Signing. Click [here](#) to learn more about it. If your EXE or MSI cannot comply with [Microsoft Store policy 10.2.9](#), you can consider repackaging your existing EXE or MSI to MSIX format. Microsoft Store offers many complimentary benefits for MSIX format such as code signing, hosting etc. For more details, [click here](#). You can run your EXE or MSI installers through [MSIX Packaging Tool](#) and obtain an MSIX package that you can submit to the Microsoft Store as [MSIX packaged app](#). Note that you have to [delete your app name](#) from existing Win32 app in Partner Center in case you want to use the same for MSIX packaged app.

The following packages are affected:

Package URL	Code signing type	Description
https://monmatinapp.netlify.app/MonMatin Setup 1.0.0.exe	Unsigned	Package should be signed with SHA256 or higher algorithm
